SOR/Hot Files 2.0

2019 OpenFox® Training and Implementation Meeting

Maria Martinez and Karen Yuan

What is SOR?

The SOR system assist agencies with monitoring and tracking sex offenders after their release into the community

What is SOR?

- Offenders name
- Current location
- Offenses

Evolution of SOR

Flag on CCH Record

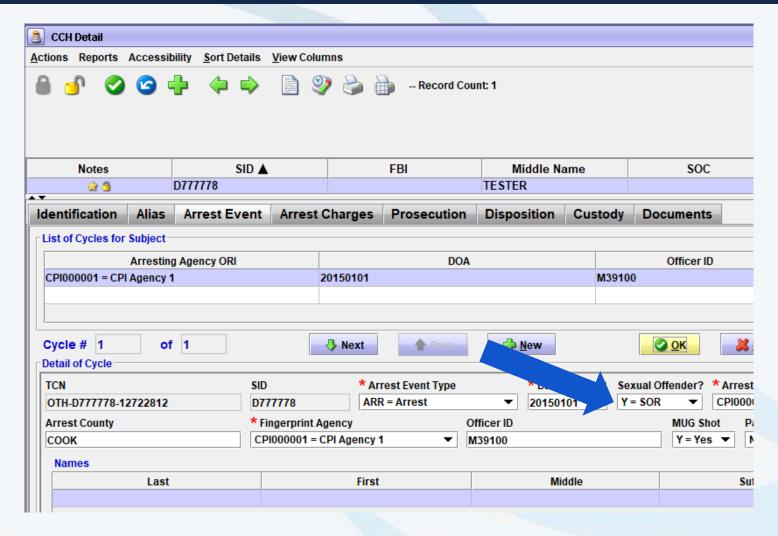

Oracle Forms

SOR 1.0

SOR 2.0

Tracking SOR Records

Demands

NCIC Implements The National Sex Offender Registry File

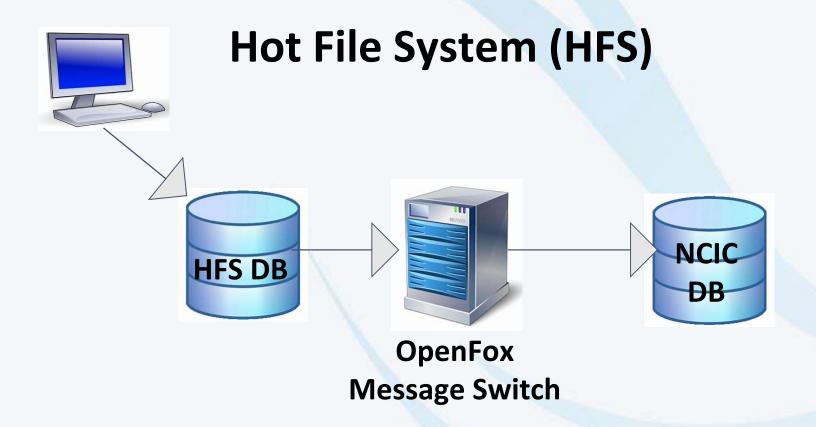

Evolution of SOR

STEP BACK, REASSESS, MOVE FORWARD

Evolution of SOR – HFS

Evolution of SOR – HFS Sync

Enter Sex Offender Record

- Enter Base (EXS)
- Enter Supplemental (EXSN)

Modify Base Record

Modify Base (MXS)

Modify Supplemental

- Cancel Supplemental (XXSN)
- Re-enter Supplemental (EXSN)

Evolution of SOR - Demands

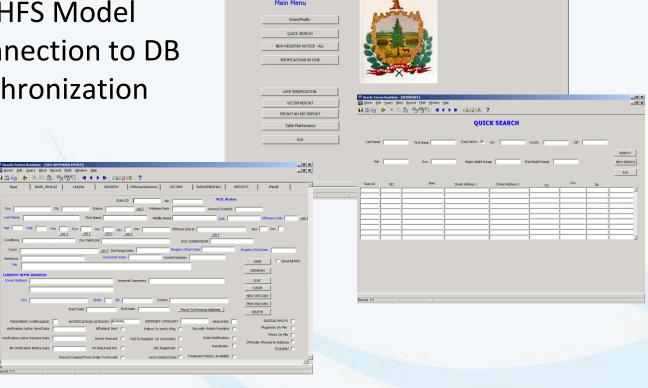

- Employment
- Vehicles
- Warrants
- Historical data

Oracle Forms

- Originated in 2003
- Client/Server Application
- Leverage HFS Model
- Direct connection to DB
- **NCIC Synchronization**

Oracle Forms - Functionality

- Search Functionality
- Record Maintenance
- Active & Historical Data
- Address Verification
- Reports & Letters
- Table Maintenance
- NCIC Sync

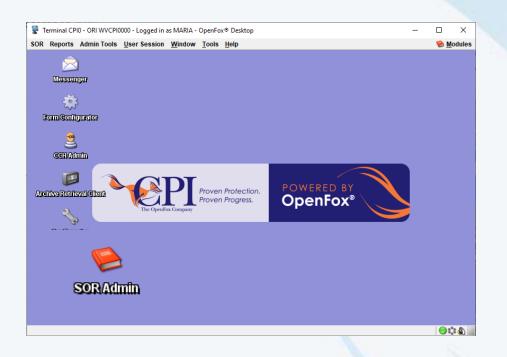

Evolution of SOR

OpenFox SOR 1.0

- Released in 2008
- Fully integrated into the Desktop
 Environment
- Takes full advantage of all features available to Desktop modules

SOR 1.0 - Functionality

- Ease of Record Maintenance
- Robust Search Engine
- Active & Historical Data
- State-Specific Data
- Image Handling
- NCIC Sync process leveraging HFS model

- Address Validation
- Geocoding
- Registration Functionality
- Signature Capture
- Enhanced Reporting/Letter design

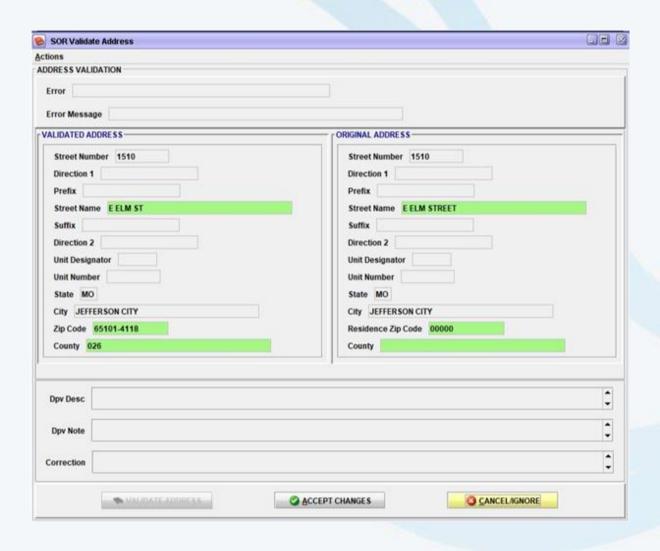

Image Processing

Address Validation

Registration Functionality

- Allows Agencies to register a sex offender
- Allows central sites to review registrations and sync with NCIC
- Registration History

Topaz Signature Pad Support

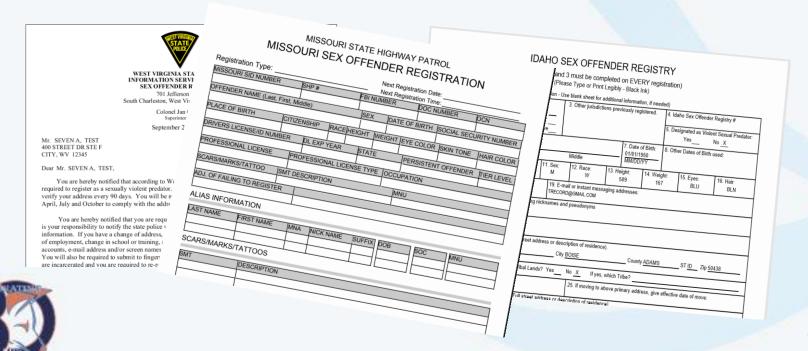

Capture offenders signature at registration

JasperReports

- Open source Java reporting library
- Rich displays that include in-line imaging
- Highly configurable

SOR 1.0 Implementations

SOR Reboot - Change is coming

SOR 2.0 - Summary

3 Tier Architecture

Patent Pending NCIC Sync Process

NCIC Data Model

Out of Box Functionality

What's next?

Where else can this technology be used?

What's next?

KAREN YUAN

Design Principles

- NCIC compliance
- Enhance performance
- Enhance flexibility
- Ease of maintenance
- Robust query functionalities
- Flexible reporting capabilities

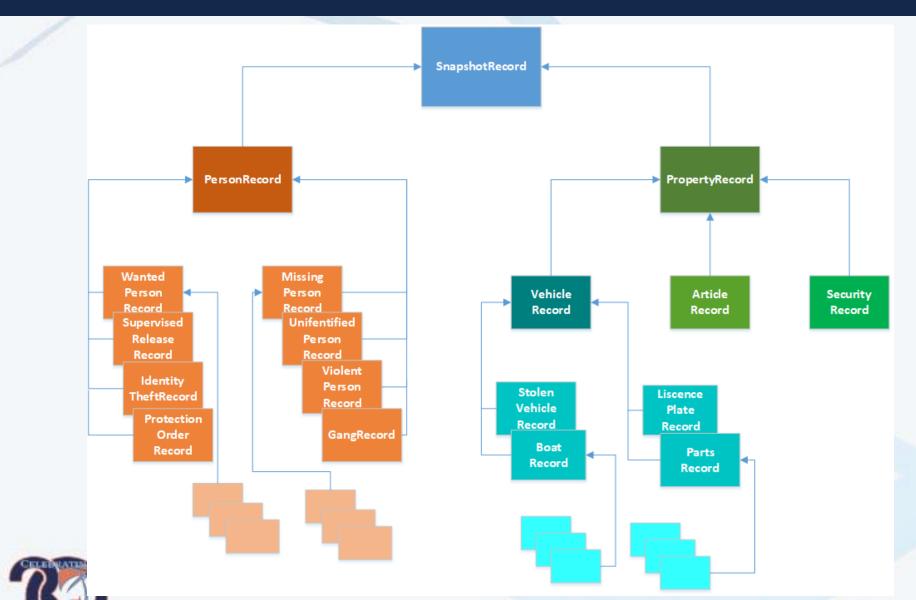

NCIC Compliance

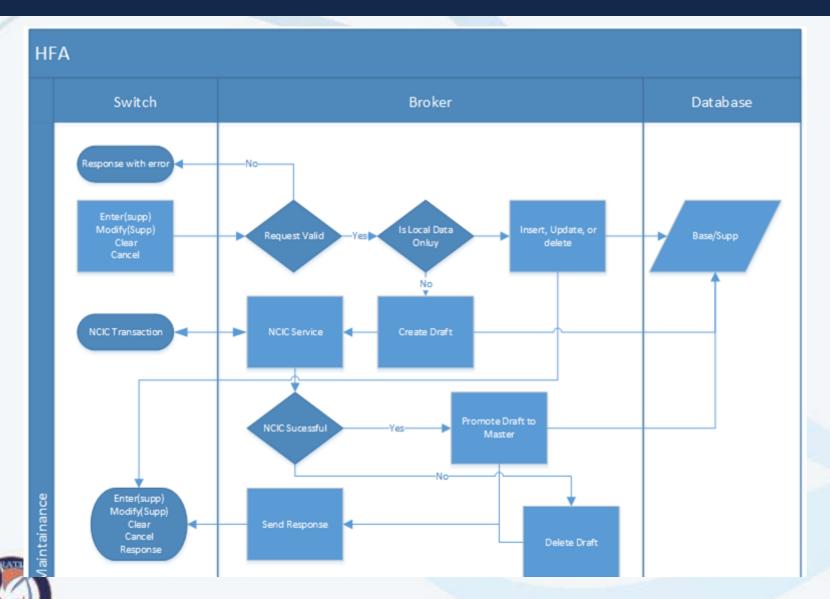

- Leverage patent pending NCIC sync technology
- New NCIC data model
 - Handle both letter O and zero for record matching
- Handle NCIC unsolicited messages
- Send unsolicited messages for local only records
- Validation and reporting capabilities

Data Models

Process Flow

Hot Files 2.0 Hibernate Framework

- Underline database independent
- Code auto generation
- More robust data retrieval
- Conjunction with data structure redesign

Reporting Capabilities

Real-time Replication Reporting Database

- Enhance Flexibility
- No negative impact on production database performance
- Soft delete allow reports on purged records

Current State

- Arizona under UAT
- Illinois LEADS in development
- More agile approach can be utilized
- Automated testing to ensure quality

Future State

- Adding GUI client
- Others?
- Birds of a Feather sessions in the afternoon

Thank You!
